

Safesil Smart - a new salt-based silage additive.

Safesil Smart is our latest silage additive. Safesil Smart contains preservatives (E211, E281 and E250) that are carefully selected. The result is a modern, salt-based ensiling additive that protects your farm-produced roughage.

The preservatives consist of nitrite salts that kill undesirable bacteria such as butyric acid-producing bacteria, and salts from organic acids that penetrate yeast and mould cells and damage them by lowering the pH value inside the cells. Thanks to the reduced

growth of undesirable bacteria, yeasts and moulds, the quality of the coarse fodder is maintained throughout ensiling and storage.

Safesil Smart is produced in Sweden from raw materials that are thoroughly tested to maintain both high quality and feed safety (GMP+ rating).

Safesil Smart protects all types of crops; grass, leguminous plants, maize and whole grains, in all storage systems, at dry matter levels from 25 to 45%.

- ✓ New formulation
- ✓ Quality-assured feed and raw materials (GMP+)
- ✓ Does not corrode or smell
- ✓ Protects the silage throughout ensiling, storage and feedout

**NEW
FORMULA!**

PRODUCT DATA | SMART

PACKAGING	Bulk • 1000 litre IBC container 200 litre drum • 25 litre can
USE	Dry matter content 25-45%. For all crops; grass, clover, maize and whole grain silage in all storage systems; bunker silos, tower silos, wrapped bales and a variety of tubular bags. The silage can be fed two weeks after ensiling, but we recommend 6 weeks for the ensiling process to complete. Use before ensiling; must not be added directly to the feed mix.
STORAGE LIFE & STORAGE	2-years' storage life from the date of production. Store Safesil Smart with a securely closed lid in a dry, ventilated space. Do not store Safesil Smart in direct sunlight. If the liquid freezes, it will revert to a harmless solution when thawed.
CONTENTS	Sodium benzoate (E211) Sodium propionate (E281) Sodium nitrite (E250) Water Active substance: 30% Density: 1.135-1.155 g/cm ³

DOSAGE	Safesil Smart is a pre-mixed solution for dosing as follows: Under normal ensiling conditions (≈DM 30%): 3 litres/tonne green material For more information on dosages, visit www.safesil.se
CLASSIFICATION	Irritant; for further information, see safety data sheet.
PRODUCTION	Safesil Smart is a Swedish product, produced in Falkenberg. The production chain is feed-safe according to GMP+.
WARNING	Do not inhale the gases that form naturally during the ensiling process; they can be very dangerous.
